Quantitative Data Engineer

The Quantitative Engineering and Data group in Dublin is a new group focused on developing tools, processes and datasets to enable revenue generation using data at Susquehanna. We partner with Quantitative Researchers, Traders and other engineering teams in Dublin and across the globe. The QED Dublin group is on an exciting strategic mission that will transform the speed of innovation of the business.

Job Summary:

You will work closely with Quantitative Research and Trading to analyse data, and develop datasets for research and trading opportunity evaluation. As you develop in the role you will gain an intuition into the needs of a quantitative trading business. This intuition coupled with your data skills will enable you to deliver tangible value to the company.

- Member of the Quantitative Engineering and Data group
- Responsible for enabling research and trading activities using a range of data science, analytics, and engineering skills.
- Source and cleanse data, develop and maintain data pipelines.
- Partner with researchers in the research development process, taking on tasks that fit your skillset, thereby enabling research productivity.
- Improve performance of research process through automation or adoption of new tools.
- Develop expertise in Susquehanna's systems and business.

What we're looking for:

- Degree in a STEM subject with evidence of independent work either from work experience, MSc, or PhD.
- 3+ years professional experience in Python including use of NumPy, Pandas and other scientific libraries.
- Experience working in a Linux environment.
- A desire to work closely with Researchers and accelerate their research.
- The ability to self-manage, self-motivate, and seek process improvement opportunities.
- Strong interpersonal and communication skills that enable you to collaborate effectively in a quantitative domain.
- Attention to detail and ability to react to changing priorities.
- A general interest in quantitative trading.
