TECHNICAL INTERVIEW

Your next interview has been scheduled with a Software Engineer and will focus on technical aptitude. During this conversation, the Engineer will review a coding problem with you to learn more about your skillset and approach to problem solving.

We ask that you have access to a computer in order to work through the problem with the technologist using CodeSignal during the interview.

CODESIGNAL

HERE'S HOW WE CHOOSE THE ENGINEER YOU WILL BE SPEAKING WITH:

LANGUAGE: You will speak with someone who is developing or has developed in your language of expertise.

TEAM: The Engineer will be on a team that aligns with your skillset and interests.

Your technical interview will take around 60-90 minutes and will cover a range of computer science topics such as data structures, algorithms, and object-oriented design patterns. Other computer science concepts that we may cover include big O notation, tree/graph traversals, recursion, searching/sorting, hash tables, concurrency, and similar topics. We ask that you have a pencil and paper handy.

PLEASE NOTE: The use of any automated and/or external code generation tools is not permitted.

Interview Tips:

To help you prepare for your interview, our engineers put together the following tips:

- Our questions aren't meant to trick you! Our goal is to understand your approach to technology. We want to learn about what you've done.
- When reviewing the problem in CodeSignal, we are interested in hearing about your thought process as you approached the problem.
- When answering questions, we want to hear your real life examples.
- Know your resume. We're interested in learning about you and we may ask about anything listed on your resume.
- Be yourself!

AFTER THE INTERVIEW

Your recruiter will follow up within a few days with feedback. If you aren't a fit for our current roles, don't worry. We keep in touch with candidates and will consider you for future openings.

If we think there's a potential fit, you will be invited to a virtual interview day with additional team members.
